

MBT SALES OPERATIONS

User Manual

Field Coverage, Accounts, and Reporting for MBT Sales Engineers
and the Business Development Team

ronaldacedillo-coder.github.io/mbt-sales-app

Author Ronald Acedillo, Commercial AC Head, CMI-MBT

Updated July 27, 2026 — covers account history and AI-assisted FCR suggestions, the FCR attendee designation field, tightened Pipeline import routing, and MCP (Actual) daily notes

1. OVERVIEW

One shared app, four kinds of records

MBT Sales Operations is the shared web app MBT Sales Engineers (SE), the Business Development (BD) team, the National Sales Manager (NSM), and the Commercial AC Head use to profile accounts, plan monthly coverage, log field visits, and route that work through approval. It runs at ronaldacedillo-coder.github.io/mbt-sales-app and shares its login and account roster with the separate MBT Project Pipeline app.

Accounts

The shared address book of dealer/prospect companies, each profiled once with Trade Terms and coverage details.

MCP (Plan)

The Monthly Coverage Plan a rep proposes for the month ahead, approved before the visits happen.

Field Contact Reports (FCR)

What actually happened at each visit — acknowledged by the account, then approved by the rep's manager.

MCP (Actual) & MCP Archive

A rollup of the month's acknowledged FCRs into a coverage report, with every export kept as a permanent archive entry.

2. GETTING STARTED

Signing in and finding your way around

Signing In

Sign in with the email and password your administrator set up for you — there is no self-service sign-up. Forgot your password? Contact your administrator to reset it.

Desktop & Laptop

The full navigation sidebar stays visible on the left at all times.

Tablet & Mobile

The sidebar becomes a slide-in menu. Tap the ☰ icon top-left to open it, tap any link to go there, or tap outside to dismiss it.

Every list, form, and calendar in the app — Accounts, MCP (Plan), FCR, approvals, and the weekly report — reflows to fit the screen, so the same workflow works whether you're at a desk or filling in a report from a customer's lobby on your phone.

3. ROLES AND APPROVAL CHAINS

Every account has exactly one role

Role	Team	Creates	Approves
Sales Engineer (SE)	MBT Sales	MCP (Plan), FCR, Accounts	—
BD Engineer	Business Development	MCP (Plan), FCR, Accounts	—
National Sales Manager (NSM)	MBT Sales	MCP (Plan), Accounts	SE's MCP (Plan) and FCR submissions
Commercial AC Head	— (approver only)	Accounts	BD's and NSM's MCP (Plan) and FCR submissions

The NSM plans their own MCP (Plan) and can profile Accounts, but doesn't file FCRs — only the reps who actually visit customers (SE and BD) do. The NSM's own MCP (Plan) goes to the Commercial AC Head for approval, same as BD's.

The Commercial AC Head can also permanently delete an FCR or MCP (Plan) within the same scope they approve (BD submissions, plus BD/NSM for MCP (Plan)) — see the Quick Reference section.

4. ACCOUNTS

Profiling an account

Accounts are the shared address book every rep and manager can see. Anyone — SE, BD, NSM, or Commercial AC Head — can add or edit an account. An account must be fully profiled before it can be selected in MCP (Plan) or an FCR. From Accounts, click New Account and fill in:

- **Company Information** Name, industry, size, website, description.
- **Trade Terms (required)** Direct CMI Trade Terms Agreement, or transacts through an MBT Distributor (Polaris or G-Energy). The account can't be saved, or appear in MCP (Plan)/FCR dropdowns, without this.
- **Location & Contact Information** Address, region, and how to reach the account.
- **Coverage & Classification** Owner/s, Region, Dealer Classification, Channel, ASE/TSE, and Visit Frequency — pulled automatically into FCRs instead of being retyped on every visit.
- **Business Intelligence & Suggested Talking Points** Optional notes on budget, pain points, and goals, plus a starting-point talking-points template based on the selected industry — not a live AI analysis of the account.

4. ACCOUNTS

Assignment and Pipeline links

Assigning a Sales Engineer (ASE/TSE)

ASE/TSE is a dropdown, not a free-text field — it lists only users whose role is Sales Engineer, so an NSM (or anyone else) profiling a new account can hand it off to the right rep without misspelling a name or picking someone from the wrong team.

This is the field the NSM uses in practice to assign a newly profiled account to one of their Sales Engineers for field coverage.

Related Pipeline Projects

An account's detail page can be linked to project inquiries from MBT Project Pipeline (search by dealer, end-user, consultant, GC, or distributor name).

Linked projects show their status, target delivery, and pricing, and can be imported straight into an FCR's Project Opportunities table during a visit instead of retyped.

5. MCP (PLAN)

Monthly Coverage Plan, start to finish

MCP (Plan) is where a rep proposes which accounts they'll visit over the coming month before the month starts, laid out on a calendar with an AM/PM slot per visit.

The Commercial AC Head sees a trash-can icon on each BD or NSM entry in the MCP (Plan) list and can permanently delete it — useful for clearing out duplicate, test, or otherwise unwanted plans. This does not cover SE-submitted plans.

6. FIELD CONTACT REPORTS (FCR)

6.1 Creating an FCR

An FCR records what actually happened during a visit: coverage notes, project opportunities discussed, and action items. New FCR is available to Sales Engineers, BD Engineers, and the Commercial AC Head — not the NSM, whose role here is reviewing and approving the SE team's FCRs.

From Field Contact Reports, click New FCR, pick the account (only profiled accounts are selectable), and fill in the visit date, AM/PM, and coverage notes. The Customer Information block fills in automatically from the account's profile and can't be edited here — correct it on the Account record instead. Save Draft at any point to come back to later.

UPDATED

Meeting Attendee (Account Side)

The attendee block now captures three fields, in this order, before the acknowledgment request can be sent:

1 Name

2 Designation

3 E-Mail Address (required)

6. FIELD CONTACT REPORTS (FCR)

NEW — Account history & suggested discussion points

As soon as an account is selected on a new or draft FCR, the form shows two things above the rest of the report, so the rep has context before writing this visit up:

Previous Visits to This Account

A paginated viewer of this account's own past FCRs, one visit at a time — coverage notes, get-back items, project opportunities, and competitive checks, with Prev/Next controls to page through the whole history.

Suggested Discussion Points

Generated automatically from patterns across every past visit: open opportunities that keep coming up, an outstanding follow-up from the last visit, competitor activity noted recently, and a nudge if it's been a while since the last visit.

RULE-BASED — NOT AI-GENERATED

This card is a transparent, rule-based summary of the rep's own past entries — not a call to a generative AI model — and the app labels it that way so it's never mistaken for the AI-generated card on the next slide.

NEW — 6. FIELD CONTACT REPORTS (FCR)

AI-Generated Suggestions, powered by Gemini

A second, separate card lets the rep generate real AI-drafted talking points on demand — a genuine call to Google's Gemini model, not another rule-based pass over the data.

1

Click

"Generate AI Suggestions" on the account's FCR form.

2

Gemini reviews

the same visit history the rule-based card uses — nothing extra is sent.

3

4–6 points drafted

e.g. pushing a stalled negotiation to close, following up on a lost bid to a competitor, or proposing a spec-in angle.

4

Review before relying

on it — Gemini can occasionally miss context or phrase things oddly.

Labeled "AI-Generated (Gemini)" and kept visually distinct from the rule-based card, so it's always clear which suggestions are automated pattern-matching and which are genuinely AI-generated — the app is deliberately honest about the difference.

6. FIELD CONTACT REPORTS (FCR)

6.2 Project Opportunities & Pipeline imports

If the account has linked MBT Project Pipeline projects, they appear in the Related Pipeline Projects panel with an import button. Where an imported project lands depends on the team filing the FCR and, for Sales Engineers, on the project's Pipeline status:

Sales Engineer FCRs

Bidding status → imports into Qualified / Identified

Final Negotiation status → imports into Under Negotiation

Any other status → not imported automatically — add it to the table by hand if you still want it recorded.

BD FCRs

Bidding status → imports into Qualified / Identified

Otherwise → imports into SPEC-IN only if Pipeline's own Spec-in field confirms Midea is in the account's approved brand list (Yes, Exclusive Midea, or Midea Included in Approved Brands)

Neither condition met → not imported automatically.

6. FIELD CONTACT REPORTS (FCR)

6.3 Requesting acknowledgment from the account

Send the request

Before an FCR can move forward, the account side needs to confirm the visit happened. In the Account Acknowledgment card, click Send Acknowledgment Request (this requires the attendee's email to be filled in).

What it sends

This emails the attendee a summary of the meeting minutes and a one-click Confirm Meeting Happened button.

Where concerns route

The email's footer tells the attendee who to contact if something looks off: Jamaica Linsangan for MBT Sales Engineer visits, or Ronald Acedillo for BD Team visits — so concerns reach the right supervisor directly, without going through the rep first.

6. FIELD CONTACT REPORTS (FCR)

6.4 What happens when the account confirms

The attendee doesn't need an account or login — they open the link, review the minutes, and click Confirm Meeting Happened. The moment they do:

- The FCR's acknowledgment status flips to Acknowledged, with the attendee's name and the date recorded.
- If the FCR was still a draft, it is automatically submitted for approval at the same time — no separate "Submit for Approval" click is needed.
- The confirmation screen also includes an optional comment box — the attendee can add a note before confirming, or leave it blank. There is nothing to fill in on the SE/BD side for this.
- Back in the app, click Refresh Status on the Account Acknowledgment card to pull in the latest state. If the attendee left a comment, it appears there too, underneath the Acknowledged badge.

6. FIELD CONTACT REPORTS (FCR)

6.5–6.6 Manual submission & manager approval

The safety-net path

The Submit for Approval button only enables once the account has acknowledged the visit. In practice, acknowledgment already submits the FCR automatically — this button mainly exists to resubmit a previously rejected FCR after revisions.

Who approves whom

The NSM (for SE submissions) or Commercial AC Head (for BD submissions) reviews pending FCRs from FCR Approvals and approves or rejects each one. A rejection requires a reason, which the rep sees and can act on before resubmitting.

Commercial AC Head cleanup

Also sees a trash-can icon on each BD FCR in the Field Contact Reports list and can permanently delete it — e.g. a test, duplicate, or otherwise unwanted entry. Does not cover SE-submitted FCRs.

6. FIELD CONTACT REPORTS (FCR)

6.7–6.8 Exporting a PDF & reading status at a glance

The Export PDF button on an FCR only becomes active once that FCR has been fully approved by the NSM or Commercial AC Head — acknowledgment alone is not enough. Until then, it's greyed out with a tooltip explaining that it unlocks once approved.

Badge	Meaning
Draft / Pending Approval / Approved / Rejected	Where the FCR stands with the NSM or Commercial AC Head.
Not Yet Acknowledged	No acknowledgment request has been sent to the account yet.
Awaiting Acknowledgment	The request was sent; the account hasn't confirmed yet.
Minutes Acknowledged	The account confirmed the visit happened.

Reminder: only acknowledged FCRs are sent to the NSM or Commercial AC Head for approval, and only approved FCRs can be downloaded as a PDF.

7. MCP (ACTUAL) AND MCP ARCHIVE

What really happened this month

MCP (Actual) shows what really happened in a given month, built live from that month's acknowledged FCRs — there's no separate data entry step for visits. Pick a month and the visit calendar fills in automatically from acknowledged reports.

NEW — Daily notes

Each date on the MCP (Actual) calendar now has a free-text box, sitting under that day's FCR-captured visit data, to record other details of the day — leaves, site visits, and similar entries that aren't tied to a specific FCR. Notes save automatically as you type and carry through to the exported PDF and the archived snapshot.

Click Generate & Export PDF to both download a PDF of the month and save a permanent snapshot to MCP Archive in the same action, so every export leaves a record you can revisit later without regenerating it. MCP Archive lists every past snapshot you've generated.

8. WEEKLY REPORT DOWNLOAD

One click for the whole week's team reports

- Every Friday afternoon, the NSM and Commercial AC Head each receive a digest email summarizing their team's week, with a link into Weekly Report Download.
- This page bundles every acknowledged FCR and every MCP (Actual) archived that month, for the manager's own team, into a single .zip of PDFs — one click covers the whole week.
- FCRs that were filed but not yet acknowledged by the account are listed separately, since they can't be included in the bundle yet.

9. DASHBOARD

Home screen, adapted to your role

Reps (SE / BD)

See their own MCP (Plan) and FCR counts, this month's approved plan on a calendar, and upcoming or overdue follow-ups pulled from approved FCRs.

NSM & Commercial AC Head

Additionally see pending-approval counts across their team and a Team Overview panel (FCRs approved, rejected, and overdue follow-ups).

Quick Actions

Link straight to adding an account, starting a new MCP (Plan), logging a new FCR, or opening MCP (Actual) — at the bottom of the Dashboard.

10. QUICK REFERENCE

FCR lifecycle, start to finish

10. QUICK REFERENCE

Who approves whom, who can create what

Submitter	Approver
Sales Engineer	National Sales Manager (NSM)
BD Engineer	Commercial AC Head
National Sales Manager	Commercial AC Head

Role	Accounts	MCP (Plan)	FCR
Sales Engineer	Yes	Yes	Yes
BD Engineer	Yes	Yes	Yes
National Sales Manager	Yes	Yes	No
Commercial AC Head	Yes	No	Yes

The NSM plans MCP (Plan) but doesn't file FCRs. The Commercial AC Head profiles Accounts and files FCRs, but doesn't submit an MCP (Plan) of their own to approve.

10. QUICK REFERENCE

Deleting records (Commercial AC Head only)

Only the Commercial AC Head has a delete option, shown as a trash-can icon on list entries. It's scoped to what they can already see and approve:

Field Contact Reports

BD submissions only.

MCP (Plan)

BD and NSM submissions.

Deleting is permanent — there's no undo, and no confirmation email is sent. It's meant for cleaning up test, duplicate, or otherwise unwanted entries, not for routine record-keeping.

11. QUESTIONS OR ISSUES

Who to contact

For access problems, contact your administrator. If an attendee raises a concern about a visit or a report through the acknowledgment email, it routes to:

Jamaica Linsangan

MBT Sales Engineer visits

Ronald Acedillo

Business Development Team visits

MBT Sales Operations
